8 Inch On-Camera HD DSLR Monitor (1080P, HDMI, AV, 10 Hours working time)

Product code: CVFQ-E182

8 Inch On-Camera HD DSLR Monitor: great outdoor performance, high contrast ratio and wide viewing angle; perfect for indie filmmakers or freelancers.

Step Your Game Up
This on-camera monitor for DSLR cameras and camcorders provides a clear and accurate image of what's being recorded without having to look through your camera's tiny built-in monitor. This makes framing, focusing and previewing faster and easier than before while allowing you to position the monitor at different angles without being forced to keep your eye level with the back of the camera. This HD

DSLR monitor connects to your camera's hot shoe adapter, provides HDMI and VGA inputs and comes with a 6000mAh battery for run-and-gun shooting of up 10 hours! Continue reading to get the full scoop.

Great Outdoor Performance
This HD monitor is one of our brightest monitors yet thanks to the enhanced 300 cd/m2 backlight. This produces a crystal clear picture and shows colors vividly, even when used under sun light. Additionally, a light-hood is also provided to ensure a perfect picture under excessive lighting conditions as well as image adjustments like color temperature, red, green, blue adjustments, image flip and more.

High Contrast Ratio
Professional camera crews and photographers require accurate color representation on their field monitor, and this high resolution monitor provides just the same. The LED matte display has a 500:1 color contrast ratio so colors are rich and vibrant, and the matte display prevents any unnecessary glare or reflection.

Wide Viewing angles
The display on this 8 Inch monitor remains perfectly viewable 140 degrees horizontally and 110 degrees vertically (from the center point). You can be standing adjacent to the monitor and still experience a perfectly clear picture. This feature is useful for when there are multiple cameramen and a director standing around the monitor to view content. Nobody will get a distorted picture.

At a Glance...

- Super bright 1080P HD DSLR 8 inch monitor
- Anti-glare screen works great even under sun light
- High Contrast Ratio: 500:1
